

airPHX®: Over 100 Facilities and Growing!

“Protect, Don’t Infect”

airPHX is the quick, easy, and affordable solution to the incessant odors and bacterial incursion that are the bane of athletic spaces. A game changer, airPHX® (pronounced air-fix) has adapted its patented disinfection technology to the fitness world and the word is spreading. airPHX eliminates odors, bacteria, viruses and other harmful organisms throughout a facility — in the air and on surfaces including: equipment, turf, rubber, foam, and tile. Bacteria, MRSA, C.DIFF, mold, Staph, athlete’s foot fungus, and norovirus — virtually eliminated with the flip of a switch.

airPHX | SPORTS changing the industry!

How does airPHX technology work? airPHX technology generates clean air using a small (17.5” x 16” x 8.5”) wall mounted device that plugs into an ordinary outlet. A “cold plasma” chamber kills harmful SURFACE and AIRBORNE organisms organically and continuously, even on hard to clean surfaces. One unit will treat up to 150,000 cubic feet, achieving better than hospital grade levels of cleanliness. And when the clean air circulates thru HVAC systems, airPHX produces benefits throughout an entire building!

SEE WHAT OUR CUSTOMERS HAVE TO SAY ...

airPHX and Athletic Training

Two SEC athletic programs recently became airPHX customers.

“At University of Tennessee, we have always placed a priority on student athletes’ health and safety. Even with our existing rigorous cleaning protocols, we believed we could see even greater levels of bacteria and virus reductions using airPHX, and we were right. airPHX resulted in a 40% reduction in germs in our football equipment room which is now considered “clean and acceptable” based on industry standards. And the odors from all the hard to clean equipment like helmets and pads were noticeably reduced.”

- Roger Frasier, Facility Athletic Equipment Manager.

Another SEC athletic program noted that *“After we experienced a staph infection affecting some of our track and field athletes, we looked for ways to reduce the likelihood of a recurrence. We were introduced to airPHX and installed a unit in the track and field locker room. Validation testing demonstrated greater than 94% reduction of germs on surfaces and greater than 92% reduction in the air. The staph problem went away and hasn’t returned. In fact, there have been no infection issues since we started using airPHX.”*

- Assistant Athletic Trainer for Track & Field for an SEC University.

airPHX and Wrestling

65-year wrestling vet and wrestling Hall-of-Famer Gary Frey has quickly become an emphatic believer in the technology. Frey’s long and distinguished coaching career included 29 College All Americans and high school and college championships. He is the founder and President of SUPLAY-Wrestler’s World, an internationally known supplier of premier wrestling gear. Schools, colleges and clubs look to Suplay for the best in wrestling equipment and “cutting edge” breakthroughs for enhanced performance, safety, and longevity.

“The test results documented by a neutral, independent testing lab blew me away,” says Frey. “You can’t coach against sickness and disease, but airPHX gives you a leg up and a huge competitive advantage. I want to get the word out to every wrestling program in the country that there is now a solution for the skin and respiratory problems that have plagued the wrestling community for decades. Finally, a coach can focus on conditioning and technique and not have to worry about the persistent health problems that dog and destroy so many teams. I’m convinced airPHX is the answer.”

airPHX and Fitness Clubs

“I wanted to take a moment and provide a (rare) testimonial of your fantastic product. As you know, cleanliness is of the utmost importance in the fitness industry. Our airPHX unit really helps keep our Crunch gym in Raleigh smelling fresh and clean. Our members and staff noticed almost immediately after installation. Best of all, this is the worst year on record in Raleigh for pollen, and it’s really helped keep our members and employees from having allergy issues. Thanks to you and your team for creating such a great product!”

- JD Wright, JF Fitness of North America

“We are a very family oriented club, we offer a 35,000 sq. ft family entertainment center (essentially an indoor park) as one of the features of our facility. The health of our kids, families, and all our members is

a top priority for us. Cleanliness is one of our company values and airPHX provided the exact solution to keep our members healthy through the long winters we have in Minnesota. Given the size of our club, we were astounded by the scope of coverage airPHX technology provided throughout our entire project. We are grateful for the impact airPHX has had on our member and employee experience."

- Matt Remick, CEO, Rochester Athletic Club

"The YMCA of East Tennessee is located in the historic Lindsay Young YMCA building, built in 1929 and the third oldest YMCA in the country. We were looking for better, cost effective ways to disinfect our facility, including reducing mold levels. After obtaining details on the technology from regional airPHX representatives with the BSW Group, we were very excited about the opportunity to see the device in action. We were amazed at the results. Pathogens including bacteria, viruses and molds on surfaces were reduced by greater than 98% with reductions of airborne pathogens of greater than 97%. airPHX not only delivered as promised, the results wildly exceeded our expectations."

- Kim Ballard, COO, YMCA of East Tennessee

"As we all know, the fitness industry is highly competitive, and we are constantly looking for ways to differentiate our facility from others. Putting members' health first in every way possible is a top priority. With airPHX and its unique ability to continuously disinfect air and surfaces, we have exceeded that goal beyond our wildest expectations and those of our members. Not only is our 24/7 gym cleaner and healthier, the unit eliminates odors and freshens the air organically. Our members have noticed the difference and the enhanced workout experience."

- Terry Delamater, Round the Clock Fitness

Effective treatment of one unit

- All ambient air in the space
- Flooring, including Turf
- Rubber
- Equipment
- Weights
- Pads, bands and straps
- All surfaces exposed to the air!

What does it eliminate?

- Odors
- Influenza (the common cold)
- Norovirus
- MRSA and Staph
- Athletes foot
- Over 30 common Bacteria and Viruses and the odors they cause

Chemical Free

100% Organic
